MODERN
MOULDING

The innovative system designed by Modern Moulding can cut hours off installation and cleanup time. With one of our offered coping kits, a standard pool can be set up and ready to pour in as little as one hour. Versatility is provided with a variety of profile designs, as well as installation capabilities for **vinyl, fiberglass, concrete/gunite pools and autocover.**

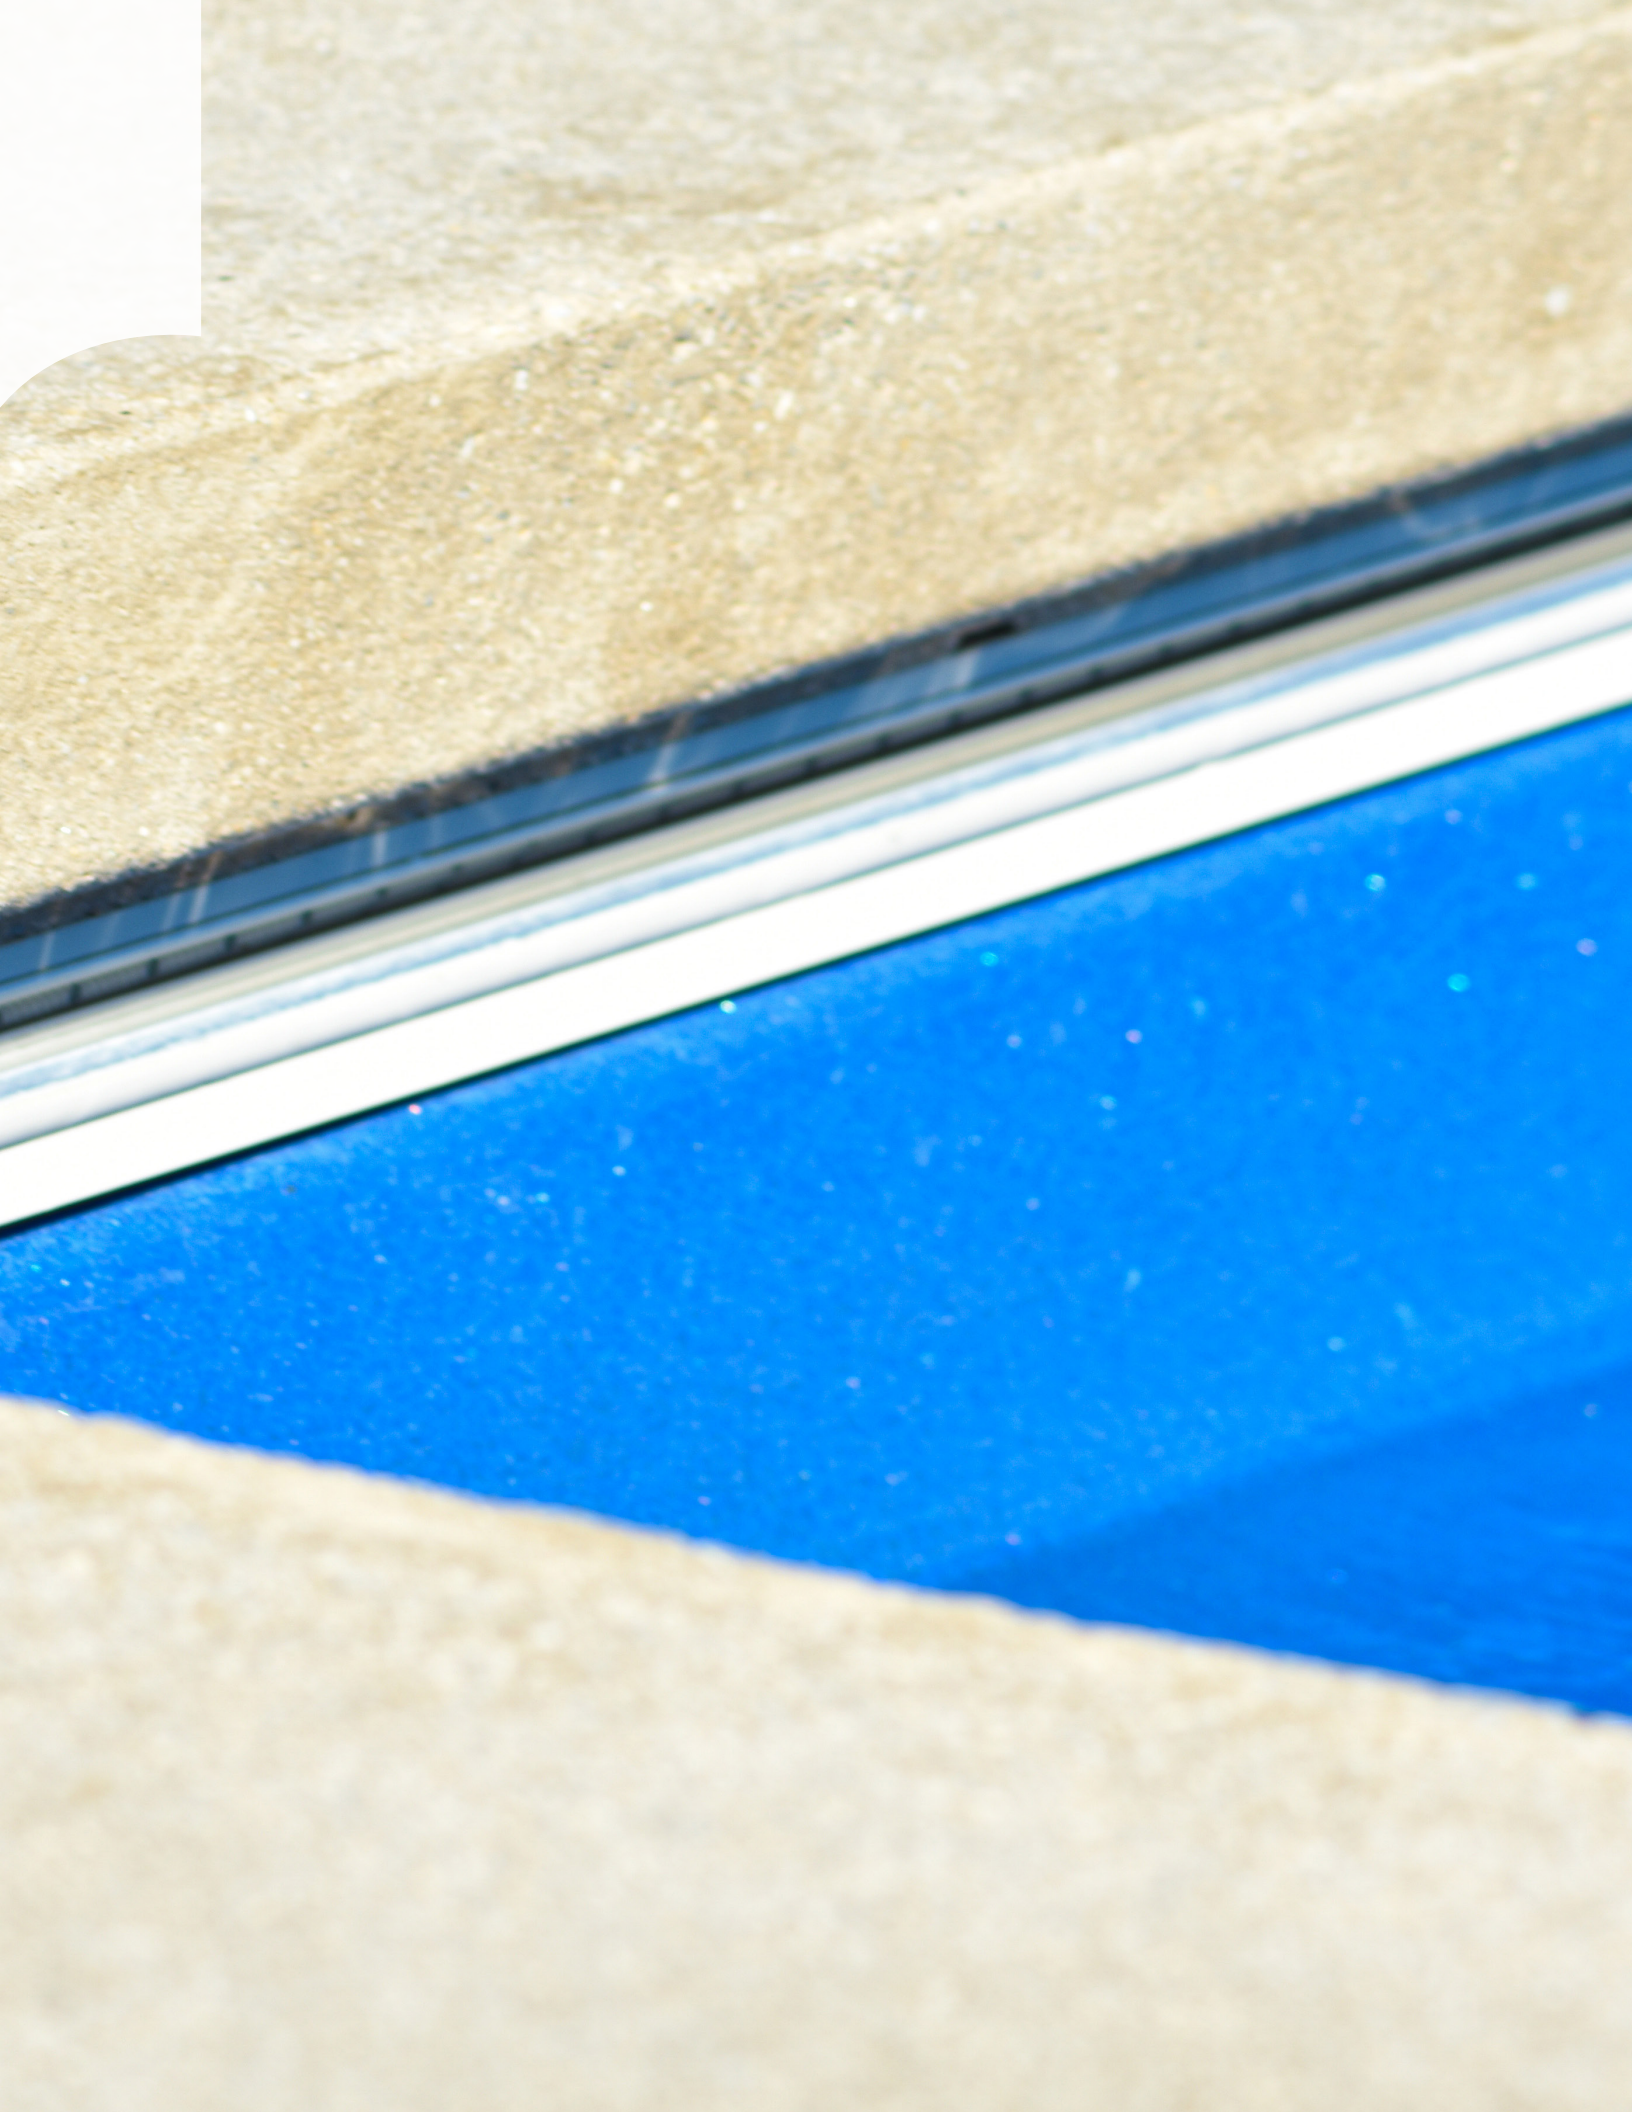

BENEFITS:

- Can combine forms onto existing Fox Pool & Quaker shipments at no additional cost.
- No two-way tape required
- Easy to install

VINYL LINERS ONLY

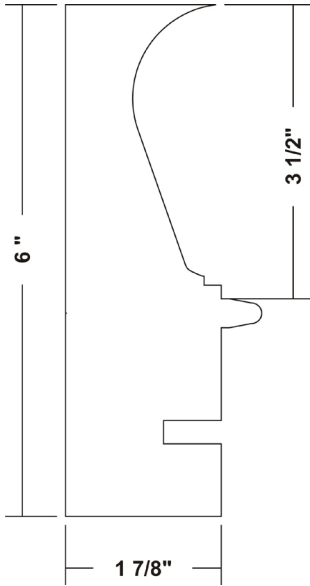

- Forms wedge directly into liner track, leaving track clean of debris.
- Modern Moulding's Vinyl Liner system uses reusable lock-in clips to hold the forms in place. These clips have an extended support to keep the forms from tilting when concrete is poured.

VINYL LINER SYSTEM INSTRUCTIONS

1. Choose a profile
2. Tape the forms where bending is required. 3" filament tape is highly recommended.
3. Insert each 8' foam piece coping into the liner track.
4. Using the scribed line as a guide, insert the reusable clip horizontally into the track.
* double track not required
5. Lock the clip with a 1/4 turn.

TIPS:

- Remove the bending tape before pouring the concrete.
- Lubricate forms with an oil or cooking spray before pouring for easy removal.
- Use your hands or a gentle vibrating tool to vibrate the forms gently. A 5-6 slump is recommended.
- Clips should be 8 - 10" apart on a rectangular pool and 10-12" apart on a free form pool.

FIBERGLASS SYSTEM INSTRUCTIONS

1. Modern Moulding Styrofoam Forms are designed to cradle the fiberglass pool wall, eliminating the need for a plumb strip.
2. The forms are perforated every 3" to accommodate the 2 piece Universal clip as required. Place the forms along the pool and screw down the UD Clip to the top of the fiberglass or concrete pool.
3. Once the concrete has been poured and you are ready to strip, simply slide off the UB clip and remove the forms one 8ft. section at a time. Use the slide hammer tool to pull out the remaining UD tab.

TIPS:

- Remove the bending tape before pouring the concrete.
- Lubricate the forms with an oil spray, or cooking spray before pouring, for easy removal.
- Vibrate the forms gently with your hand or a gentle vibrating tool. A 5-6 slump is recommended.
- We recommend that clips are 10-12" apart.
- Same day stripping is recommended.

UNIVERSAL SYSTEM INSTRUCTIONS - 2 PCS.

USED ON FIBERGLASS,
CONCRETE/SHOTCRETE POOLS

1. Slide the FX-CC-UD clips into the perforated slots through the profile side of the Styrofoam form. It is recommended 8-10" apart on a rectangular pool and 10-12" apart on a free form pool.
2. Screw a 1" self tapping screw through one of the predetermined anchor points,. Note * if you are screwing into an autocover track, make sure the screw is directly behind the cavity wall.
3. Once all clips have been inserted on an 8' section, set your form tight along your pool wall.
4. Slide the reusable body (FX-CC-UB) onto the disposable clip (FX-CC-UD), vertically pressing tight to the form. Insert a small nail into the closest hole to the body to lock it into place.

REMOVAL:

It is recommended to strip off forms in 8' sections. Remove locking nail, slide off reusable body, remove the 8' section of foam, snap off perforated area of the disposable clip. Clamp the slide hammer to the 1" remaining portion and pull on a slight diagonal downward to pull it out.

TIPS:

- Use an oil spray (cooking spray) on the face of the profile for easy removal.
- Use the Modern Moulding slide hammer tool to remove the tabs.
- It is recommended to strip the forms the same day, once the concrete has set.
